

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: __SeriousVibeCoders__

Project / Product Name: __GalaxyPulse: Bridging the gap between code performance and human emotion.__

Organization / Institution (if any): __R.V. College Of Engineering__

Submission Date: __08/05/2026__

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

__Yes__

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming __Used to conceptualize the 28-field context snapshot and define the "Anti-Interrupt Rules" (Stress thresholds, Night mode logic) that allow the agent to reason about human state.__

Code generation or assistance __Utilized for generating the FastAPI backend architecture, complex Kotlin service lifecycle logic for background monitoring, and integrating the OpenRouter API for Llama 3.3.__

UI / UX design __AI assisted in designing the Product Manager Dashboard layout and the Material Design 3 interface for the Android app, ensuring a premium, "Emerald Green" aesthetic.__

Content creation __Generated 16+ files of exceptional documentation, conversational Telegram scripts, and dynamic follow-up questions that adapt to user sentiment.__

Data analysis __The core of the product—using LLMs to extract friction tags (e.g., "thermal_throttling", "edge_artifacts") from unstructured user chat and performing real-time sentiment scoring.__

Testing / debugging __Used AI to generate synthetic biometric data (Samsung Health mocks) for the prototype and to simulate edge-case user responses to test the robustness of the parsing engine.__

Other __Implementing the OpenClaw "Soul" logic, where the AI acts as a reasoning agent to decide if and when it is appropriate to engage the user based on device telemetry.__

4. Feature Origin Classification (Please add/delete based on the number of the feature)

1. Feature Name __Context-Aware Feedback Harvesting (The Sensor Engine)__

2. Self-Generated/AI-Generated/Both __ (Self-Generated architecture + AI-Generated code) __

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)

AI Tools/Platform: Antigravity / Gemini 1.5 Pro.

- **Prompt Used:** "Write a production-ready Kotlin foreground service for Android 14 that monitors UsageStatsManager every 5 seconds. It must collect 28 fields including battery temperature, RAM usage, and

connectivity status, then POST them to a FastAPI endpoint while surviving OxygenOS battery optimizations."

- **Output Summary:** A robust background service with proper permission handling and system info collection logic.
- **Modification:** Manually implemented the **OxygenOS-specific version detection** and refined the **stress-score heuristic** to correlate device heat with user cognitive load.

1. Feature Name ____ Conversational Friction Auto-Tagger (The Parsing Engine)____

2. Self-Generated/AI-Generated/Both ____AI-Generated____

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)

AI Tools/Platform: Llama 3.3 70B (OpenRouter) / OpenClaw.

- **Prompt Used:** *"You are an expert UX researcher. Analyze this Telegram chat response from a user who just used [AI Feature]. Output a structured JSON containing: 1. Satisfaction Score (1-5), 2. Sentiment, 3. Friction Tags based on the provided taxonomy (e.g., 'brush_artifacts', 'latency', 'NPU_bottleneck')."*
- **Output Summary:** A reasoning engine that converts natural language chat into quantitative data points for the dashboard.
- **Modification:** Integrated the **OpenClaw memory system** to store these tags in YAML files, allowing the agent to remember previous user complaints during future pings.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Yash Gautam

Role: Backend Developer

Signature:

Yash Gautam

Date: May 8, 2026
